

You can add links to different websites to your library's app. When a patron taps the link in the app, their device displays the page in a browser. This can be helpful if you already maintain pages on your library's website for events, news, or other information that you want to highlight without recreating this information in the app.

To add a link to a live web page to your library's app

1. From the menu in the Mobile Admin interface, choose Content.
2. Choose Add new Content.
3. Choose Live Web Page.
4. In the Name field, type a name to describe the web page that the link is to.
5. In the Web URL field, type the URL for the web page.
6. In the Publish section, select Mobile.

Live Web Page

Name Summer Events for Kids

Web URL <https://mylibrary.org/summer-events>

Zoom Level 100%

Loading Image Browse... No file selected.

Duration 30 secs

Volume 50%

Publish Mobile

Published Title Enter a published title for this item.

Published Description Enter a short description for this item.

Info Bar Content Enter a fuller description, perhaps with details on a call to action. This will be displayed when it is published to the web

More Info URL Enter the URL to open when the user clicks 'More Info'

More Info Title Enter the text which will be displayed instead of 'More Info'

Allow Download (Allows a web user to download the content file)

Searchable (Allows the item to be returned in a web search)

Shareable (Allows the user to share across social networks)

Advanced Settings

Enable Comments

7. If you want to include a thumbnail image with the content, click Advanced, then select the image you want to include.
8. Leave the rest of the fields on the page unchanged. These other fields do not have any effect on how the link is displayed in Innovative Mobile.
9. Choose Create.
10. From the menu in the Mobile Admin console, choose Mobile Apps.
11. Select the folder node where you want to add a tab for your link and choose New Tab ().
The icon is a small square with a yellow star in the top right corner.
12. Type a name for the tab, then choose Create. The name that you choose is the text that displays in your library's app.
13. Select the tab that you created and choose Edit Tab: [your tab name].
14. If you want an image to be displayed next to the name of the tab in your library's app, choose Browse next to Button Image, then select an image from your computer to upload.
15. In the Tab Contents section, select Content Item, then select your link from the drop-down list.
16. Choose Save.

Patrons who are already using your library's app will see your changes in about 2 hours. Patrons will see your changes instantly if they load your app for the first time or if they manually reload the app from the Preferences screen. You can manually reload the app on your own device to test any changes that you've made.
