Edit Languages

The Edit Languages page lets you manage the labels used in the app, including the ability to enable specific language sets and modify the text for any label in any of the available languages.

How to get here in the Innovative Mobile Administrative interface.

Mobile Apps > Languages (Bottom of the page)

Languages Enabled

Specifies which of the available languages will be available to patrons to choose for the app.

Default Language

Specifies which of the enabled languages to display when the patron first opens the app if the default language on their device does not correspond to one of the enabled Languages in the app.

String names

Lists the code for each of the labels used in the app. Beside each string name is the actual text of the string as it has been translated in each of the enabled languages. You can modify the text of any of the language strings. Any string that has not been modified from the original text is displayed in gray font. Modified text is displayed in black font. To restore the original text, completely delete the modified text.
